ABSTRACT OF THE DISCLOSURE

By analyzing a web page, the web page can be divided into component parts. Specifically, the web page can be divided into items, templates and the remaining HTML. Then, using dedicated user interfaces, each component part can be separately edited. To facilitate editing, the component parts not being edited can optionally be suppressed or presented in abbreviated form, and all parts can optionally be shown in the same order in which they occur in the web page. The live version of the web page is then updated with the edited version of the component parts, taking into consideration any contributions from other users made during the editing process.
